

American Cancer Society and Cancer Research UK Present Third Annual Cancer Prevention Research Conference

ATLANTA, June 2, 2026 — The [American Cancer Society](#) (ACS), in partnership with [Cancer Research UK](#) (CRUK), is hosting the [3rd annual Cancer Prevention Research Conference](#) from June 3–5, 2026, in Atlanta, Georgia. This premier international summit serves as a collaborative crucible, uniting the world’s leading minds across discovery, translational, behavioral, population, and implementation sciences. By breaking down traditional academic silos, the event fosters a dynamic, multidisciplinary community dedicated to sparking high-impact collaborations, sharing cutting-edge breakthroughs, and accelerating global efforts to eliminate cancer before it starts.

“This conference serves as a catalyst for cross-disciplinary pioneers to immerse themselves in, debate, and advance the absolute frontier of cancer prevention science,” said [Dr. William Dahut](#), chief scientific officer at the American Cancer Society. “Our objective is to forge next-generation strategies that actively dismantle and mitigate cancer risk, while generating the rigorous, real-world evidence needed to deploy life-saving preventive measures globally.”

Conference co-chairs [Dr. Andrew Chan](#) (Massachusetts General Hospital), [Dr. Kala Visvanathan](#) (Johns Hopkins University), and [Dr. Kwee Yong](#) (University College London) are shaping this year’s scientific program, bringing together expert speakers from across the globe to share novel insights in talks, panels, and poster sessions spanning the research continuum.

Keynote speakers are:

- Dr. Graham Colditz (Washington University in St. Louis)
- Dr. Christina Curtis (Stanford Medicine)
- Dr. Charles Swanton (The Francis Crick Institute)

The conference agenda features a wide range of topics including:

- The Role of AI in Cancer Prevention
- Lifecourse Perspectives on Cancer Prevention: From Biology to Populations (Session co-sponsored by the World Cancer Research Fund)
- Implication of Intervention of Clonal Hematopoiesis of Indeterminate Potential (CHIP) for Cancer Prevention
- Environmental Changes to Inform Prevention Science.

“Prevention is one of the clearest opportunities we have to change the future of cancer, and it will take all of us working together to realize it,” said [Shane Jacobson](#), CEO of the American Cancer Society. “Our partnership with Cancer Research UK reflects what is possible when researchers, clinicians, and partners come together across disciplines and borders to move scientific discovery closer to real-world impact.”

Also at the conference, [Dr. Raymond Dubois](#) will be honored with the 2026 Cancer Prevention Research Outstanding Achievement Award. Dr. Dubois has made substantial contributions to cancer prevention studies. His work in unmasking the mechanism and enzymes necessary for the production of cancer-driving inflammatory prostaglandin E2, and the inhibition of COX-2 as a means to intercept early cancer progression and prevent gastrointestinal cancers, has been transformative.

About the American Cancer Society

The American Cancer Society is a leading cancer-fighting organization with a vision to end cancer as we know it, for everyone. For more than 110 years, we have been improving the lives of people with cancer and their families as the only organization combating cancer through advocacy, research, and patient support. We are committed to ensuring everyone has an opportunity to prevent, detect, treat, and survive cancer. To learn more, visit [cancer.org](#)

or call our 24/7 helpline at 1-800-227-2345. Connect with us on [Facebook](#), [X](#), and [Instagram](#).
